ART cycles refer to IVF, ICSI, FER, ED, IVM, FOR and PGD combined. 798 deliveries after IVM and FOR were excluded from the calculations; totals refer to these countries where data were reported. Females of reproductive age refer to women between 15 and 45 years old (<http://www.census.gov/ipc/www/idb/country.php>). For the calculation of the cycles/million females of reproductive age, the original numbers (as found in Table I) are used, not the abbreviated numbers as mentioned in this table.

Supplementary Table SV Pregnancies and deliveries after IVF in 2010.

Country	Cycles	Aspirations	Transfers	Clinical pregnancies	Deliveries	Pregnancies per cycle (%)	Pregnancies per aspiration (%)	Pregnancies per transfer (%)	Deliveries per cycle (%)	Deliveries per aspiration (%)	Deliveries per transfer (%)

Percentages of singleton, twin and triplet deliveries are counted on the total number of deliveries with known multiplicity.

Supplementary Table SXIX The sum of fresh and FER ('cumulative') delivery rates in 2010.

Country	Cycles IVF and ICSI	Deliveries Fresh cycles	Multiple deliveries Fresh cycles	Thawings FER	Deliveries FER	Multiple deliveries FER	Deliveries Fresh cycles per initiated cycle (%)	Deliveries Fresh and FER per initiated cycle (%)	Multiple deliveries Fresh and FER per total delivery (%)
